

eXtreme Indoor/Outdoor Thermo House

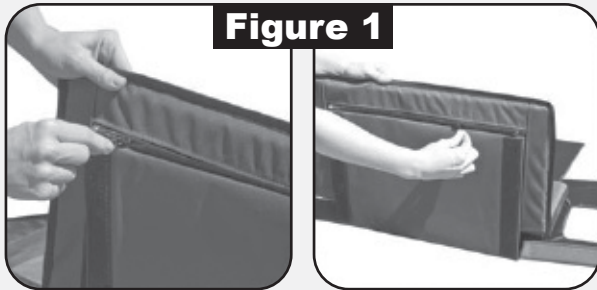

Instructions and Care

Thank you for purchasing the eXtreme Indoor/Outdoor Thermo House. Your heated Thermo House will provide years of warmth and comfort for your pet. Intended for both indoor and outdoor use, our eXtreme Thermo House can be used in the garage, on the porch, or in the barn.

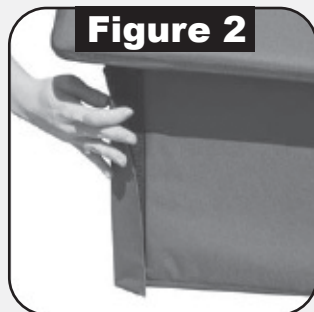

Important: Please read the reverse side for instructions about the heated pad.

- 1 Lay the black roof panel face down so that the zipper teeth face up. **See Figure 1.**

- 2 Zip both sides of the black roof panel to the two side walls of the housing structure. **See figure 1.**

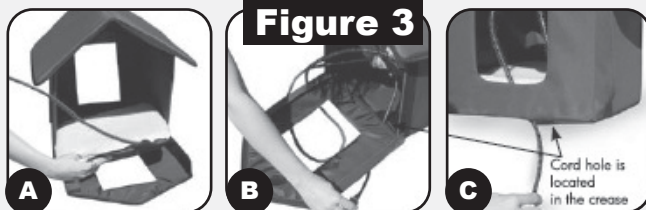

- 3 Each end door panel should be raised so that the side panels meet. Fasten them securely using the hook and loop material that is covering the edges. **See figure 2.**

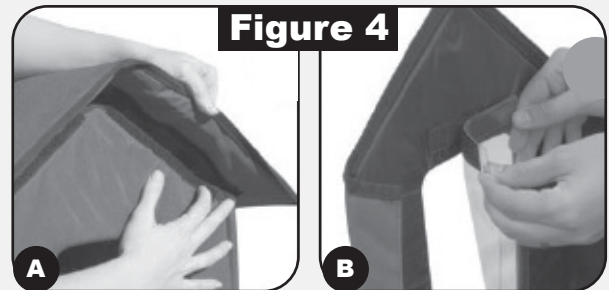

- 4 Flip this page over to read about how to set up the heated pad.

Next, place the heated pad into the Thermo Pad on the bottom panel of the housing structure before you close the second door wall. Thread the cord through the cord hole.

See Figure 3a-3c.

- 5 Find the hook and loop material under the end of the roof panels. Attach the tops of the door end panels to this area. Press them together, firmly. **See Figure 4a.**

- 6 The clear door flap already comes installed. You can reposition it if needed, by peeling it back from the hook and loop material. Make sure that the door is able to swing freely. **See Figure 4b.**

eXtreme Indoor/Outdoor Thermo House

Instructions for the Heated Bed

Thank you for your purchase of the eXtreme Indoor/Outdoor Thermo House. Your heated Thermo House will provide years of warmth and comfort for your pet. Intended for both indoor and outdoor use, our eXtreme Thermo House can be used in the garage, on the porch, or in the barn.

Warning: Because this is an electrical product, carefully read all directions and precautions before operating. If you fail to properly follow all instructions and directions, this may lead to electrical shock or fire, which may cause serious bodily injury.

Instructions for Use

- 1** The heated pad should be placed directly on a hard, flat surface inside of the Thermo House.
- 2** Pull the air valve out of the plush heating pad cover. Plug the bed into a 110–120-volt AC outlet. Allow about 15 to 30 minutes for the heated pad to warm up and expand fully. It will feel a slight bit warm to the touch. After it has expanded, push down on the center of the bed to remove a little bit of air. The built-in thermostat automatically regulates the temperature.
- 3** After it initially warms up, your heated pad will feel a bit cooler to the touch. It is designed this way for energy-efficiency. When your pet is lying on the bed, the heated pad will warm to a comfortable temperature, even when the weather is at its coldest.
- 4** To test your heated pad, place a blanket or pillow over a portion of your pad. After a few minutes have passed, place your hand under the object to feel the warmth that your pet will be feeling.
- 5** When not in use, unplug, clean and store your heated pad.
- 6** Save these instructions for future reference.

Important Precautions

The heated pad is an electrical device that must only be operated in a covered location, such as inside of your Thermo House. When using electrical appliances, follow all basic safety precautions, including the following:

READ ALL INSTRUCTIONS

- 1** **DO NOT immerse cord**, plug or appliance in water or any other liquid, in order to protect against electrical hazards.
- 2** When used near children or by children, **close supervision is needed**.
- 3** When not in use, **ALWAYS** unplug it from the outlet.
- 4** Never operate any electrical appliance if the cord or plug has been damaged. **DO NOT** operate if the appliance malfunctions or has become damaged in any way.
- 5** **DO NOT** puncture the plastic cover for any reason.
- 6** Use with a **110–120-volt AC ONLY**.
- 7** **DO NOT COVER YOUR HEATED BED** with blankets or other fabric. This is because other fabrics may not allow the heat to properly radiate and could cause the pad to fail.
- 8** When you use the pad outside, this unit must be plugged into a grounded electrical outlet that has been rated for outdoor use. Should you not have a properly grounded outlet, a certified electrician may be contacted to install one.
- 9** Be certain that the cord exits your Thermo House, therefore keeping the cord out of it.

Care Instructions: The heated pad of your eXtreme Indoor/Outdoor Thermo House may be cleaned with a damp cloth after it has been unplugged. After it is thoroughly dry, it may be plugged in again.
